

## A3 Clicky

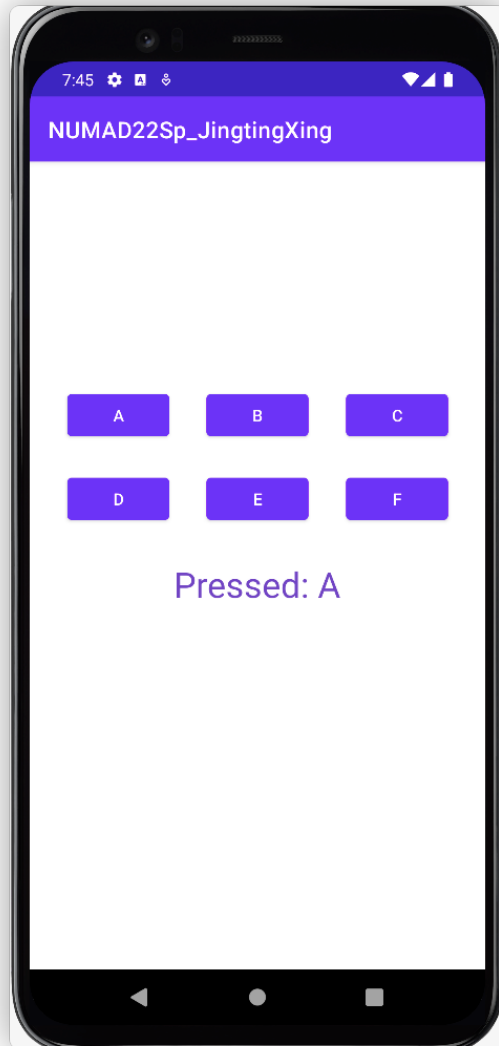

1. Take your Hello World app, and add a button labeled Clicky Clicky. Your main activity should now have "Hello World" and the "About Me" button from a previous assignment and a "Clicky Clicky" button. Clicking on the Clicky Clicky button should bring up a new activity.

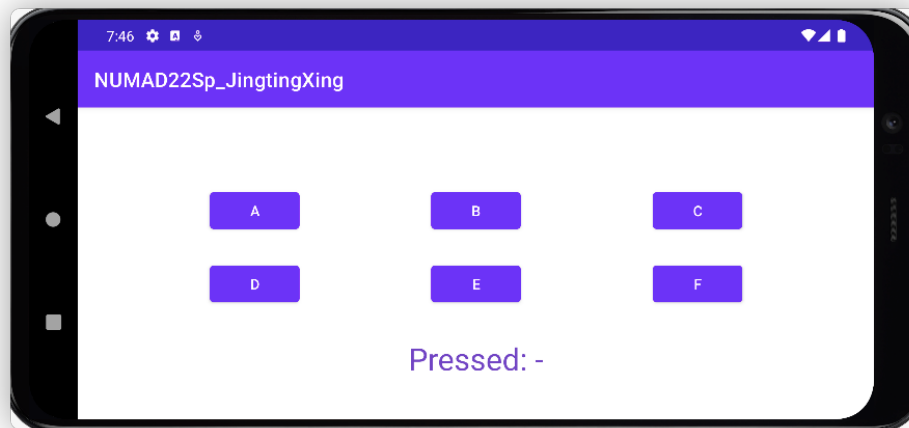

2. The new activity should have six buttons arranged in a grid, 3 across and 2 high. ConstraintLayout, not GridLayout. Label the buttons A, B, C, D, E, and F. Put text underneath the buttons. That text should read "Pressed: - " because no buttons have been clicked yet.

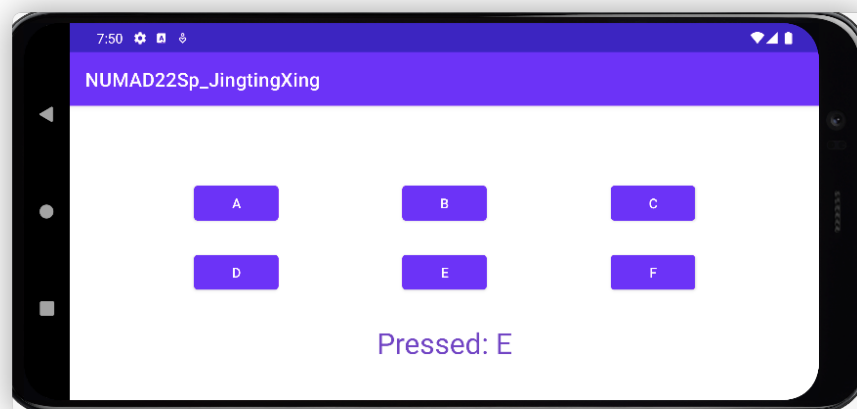

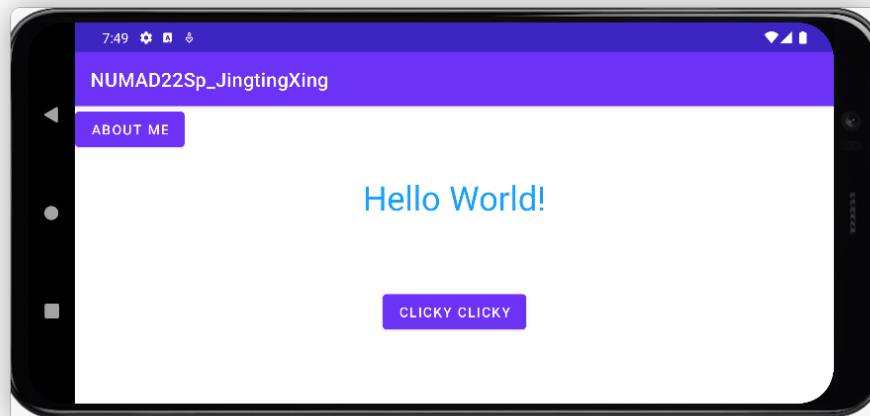

3. When button A is clicked, the text should change to "Pressed: A".

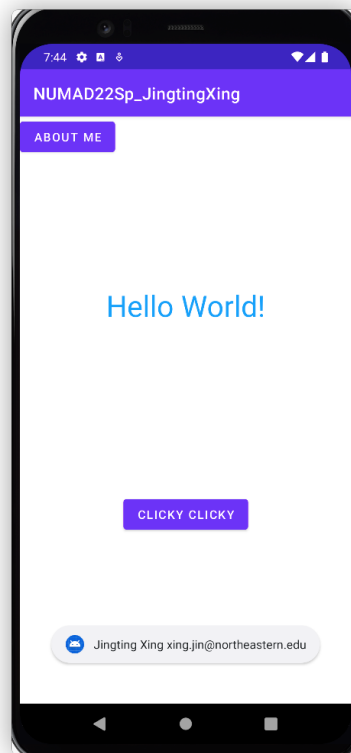

4. If the display is rotated, the text will change back to "Pressed: -".

5. Rotated layout

## 6. About me

## 7. App icon
